

SV30 *SolarVenti* solar cell and fan mounting:

To avoid transport damages and save space during transport, these parts are mounted after arrival.

1) Remove the small cover at the end of the solar air collector

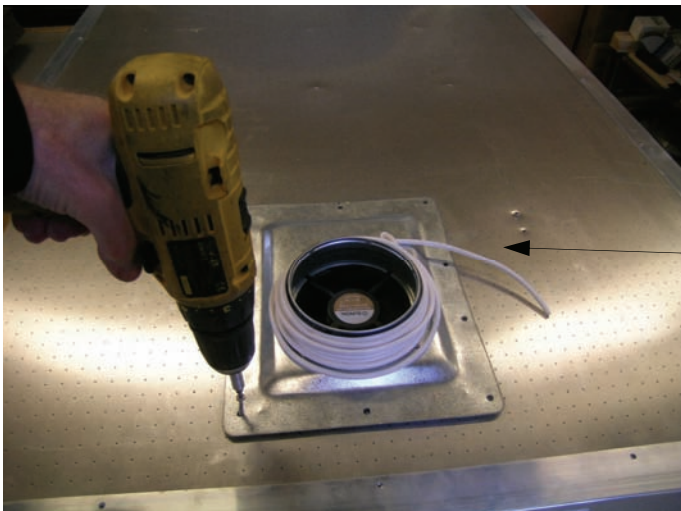

2) Slide the small 6 Watt PV-panel (solar cell) in with the connector last.

3) Slide the big 12 Watt PV-panel in with the connector first so that the two PV-panels are placed close together.

4) Connect the fan through the plugs, and slide the PV-panels all the way in.

5) Mount the fan over the opening of the perforated back of the unit. Make sure that the wires from the PV-panels cannot come into contact with the blades of the fan.

6) Follow wire diagram from the mounting instructions.
